

std::exception

```
classDiagram
    class original__nullPointerException {
    }
    class std__exception {
    }
    original__nullPointerException --|> std__exception
```

The diagram illustrates an inheritance relationship. At the bottom is a gray-shaded class box labeled 'original::nullPointerException'. It has three horizontal compartments: the top one contains the class name, and the two below are empty. Above it is a white class box labeled 'std::exception', also with three horizontal compartments: the top one contains the class name, and the two below are empty. A blue arrow with an open triangular head points from the top compartment of the 'original::nullPointerException' box to the bottom of the 'std::exception' box, indicating that 'std::exception' inherits from 'original::nullPointerException'.

original::nullPointerException
