

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class original_outOfBoundError["original::outOfBoundError"]
    original_outOfBoundError --|> std_exception
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the `std::exception` class, divided into three horizontal sections. Below it is a gray box representing the `original::outOfBoundError` class, also divided into three horizontal sections. A blue arrow with a hollow triangular head points from the top of the gray box to the bottom of the white box, indicating that `original::outOfBoundError` inherits from `std::exception`.

original::outOfBoundError
