

std::exception

```
classDiagram
    class original__nullPointerException {
        + what()
    }
    class std__exception
    original__nullPointerException --|> std__exception
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the `std::exception` class, with two empty slots below its name. A dark gray box at the bottom represents the `original::nullPointerException` class, which contains a `what()` method. A blue arrow with an open triangle head points from the `original::nullPointerException` box to the `std::exception` box, indicating that `original::nullPointerException` inherits from `std::exception`.

original::nullPointerException

+

what()
