

std::exception

```
classDiagram
    original::noElementError --|> std::exception
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class 'std::exception', which is divided into three horizontal sections. A dark gray box at the bottom represents the derived class 'original::noElementError', which is divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the derived class to the bottom section of the base class. The middle section of the derived class is empty, and the bottom section contains a plus sign followed by the text 'what()'.

original::noElementError

+

what()
