

std::exception

```
classDiagram
    class original_unsupportedMethodError {
        +what()
    }
    class std_exception {
    }
    original_unsupportedMethodError --|> std_exception
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `std::exception`, which is divided into three horizontal sections. The bottom section of this box is pointed to by a blue arrow with an open triangular head. This arrow originates from the top edge of a darker gray box below it, which represents the derived class `original::unsupportedMethodError`. This derived class box is also divided into three horizontal sections. The top section contains the class name, the middle section is empty, and the bottom section contains a public method `+ what()`.

original::unsupportedMethod
Error

+

what()
