

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class original_nullPointerException["original::nullPointerException"]
    original_nullPointerException --|> std_exception
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the `std::exception` class, divided into three horizontal sections. The bottom section is empty. Below it is a blue triangle pointing upwards. At the bottom is a gray box representing the `original::nullPointerException` class, also divided into three horizontal sections. The top section contains the class name, the middle section is empty, and the bottom section contains a plus sign followed by the `what()` method.

original::nullPointerException

+

what()
